

CIF CATALOG TRAINING GUIDE

Agenda

- **Roles/Responsibilities**
- **Creating the CIF**
 - ◆ Using the CIF template
 - ◆ Required Fields
- **Uploading the Catalog to the Ariba Network**
 - ◆ Catalog Upload/Publish Process
 - ◆ Updating Catalog Subscriptions
 - ◆ Catalog Validation and Errors
 - ◆ Network Notifications
- **Reference Materials and Support Information**
- **Timeline**
- **Questions**

Roles and Responsibilities

Suppliers are responsible for:

- **Catalog scope and validation**
 - ◆ Own and maintain the Catalog content
- **Catalog Development**
 - ◆ Ariba will provide support for creation of CIF catalogs
 - ◆ It is assumed suppliers have a minimal level of computer and Excel proficiency
- **Catalog Updates**
 - ◆ Assumes suppliers will update catalogs no more than 4 times a year. Please discuss with us if you expect more frequent updates.

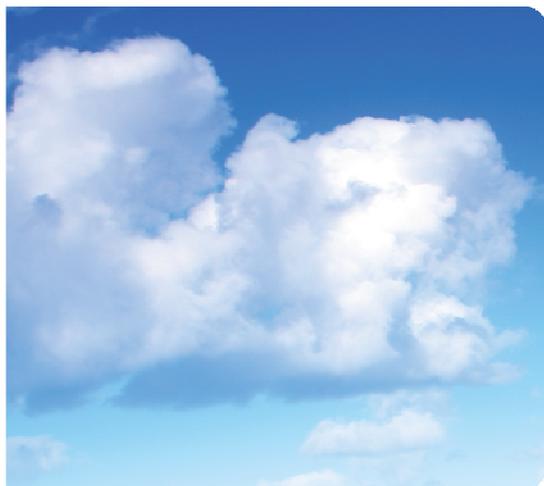

Roles and Responsibilities

WM will work with suppliers to determine catalog content/pricing.

Note: If product/pricing has not already been agreed upon, suppliers and WM should complete this discussion as soon as possible. Product/Pricing decisions should be complete before Testing(UAT), though must be concluded before a catalog can be migrated to Production.

CREATING THE CIF

Using the CIF Template

CIF – Catalog Interchange Format

This section is intended to walk you through the process of creating, making additions, updates, or deletions to your online catalog.

The template is in Microsoft Excel format (as shown below) and can be accessed from the supplier education portal: (Log in to you AN supplier site and go to Administration>customer relationships).

	A	B	C	D	E	F

Using the CIF Template

1

- ▶ The fields of the template are color coded as follows:
 - ▶ **Gray** Fields - Not used by suppliers unless specified.
 - ▶ **Blue** Fields - Required entries
 - ▶ **Green** Fields - Optional entries

- ▶ Each field in the Template contains “tool tip” help - if you hover your mouse pointer over the field, a note will pop-up with information about that field.

	A	B	C

Using the CIF Template

- 2**
- ▶ Enter the data in the correct fields.
 - ▶ Please ensure inputted data does not exceed field size.
 - ▶ Field size is indicated in the tool-tip for each field in the header row.

3 Review header section of file and make note that the only fields that will need modifying are:

ITEMCOUNT - Required.

- Represents the total number of line items being loaded.

TIMESTAMP - Optional.

- Used to reflect date & time of file preparation.

COMMENTS – Optional.

- Field is available to put any text description of file or other comments.

Populate Template

5 Supplier ID

Description: Enter your *Ariba Network ID*

Data Type: String

Maximum length: 255

Required: Yes

Note: *SUPPLIERID_DOMAIN* field in the header section must be set to “*networkid*” when using the Supplier ANID.

	A
1	CIF_I_V3.0

17	ENDOFDATA

1. For test files, please add **-T** to the Supplier ID.
Example: AN1000004323-T

2. To find your **ANID**, Log into the Ariba Network website, <http://supplier.ariba.com>, using your Username and Password.

Note: If you have an Ariba Network account but do not know your Username/password, contact Ariba Support.

Locating your Ariba Network ID

You will need to know your Ariba Network ID in order to create your catalog file. To find your ANID, Log into your Ariba Network account - supplier.ariba.com - using your Username and Password.

Your **ANID** is located in the upper right corner of the screen, directly below your name.

A screenshot of the Ariba Supplier Network web application. The top navigation bar includes 'Go to >' with links for 'Ariba Supplier Network' and 'Ariba Discovery', and a 'Manage Profile' link on the right. The main header features the Ariba logo, 'ARIBA® SUPPLIER NETWORK', a 'Test Mode' button, and 'Help' and 'Logout' links. Below the header, a 'Supplier Program' dropdown menu is open, showing 'Full Access, Basic Package' and 'ANID: AN01000002657-T'. A red circle highlights the ANID, and a red arrow points to it from the left. The main content area is divided into three sections: 'Profile Completeness' (80% progress bar), 'Search' (with fields for Customer, Order Number, and Date Range), and 'Alerts and Messages' (3 items).

Populate Template

6

Supplier Part ID

Description: Supplier's part number. *It is necessary to assign unique codes to each item in the file. Never use characters ?, {, or }, in Supplier Part IDs, as they cause validation errors.

Data Type: String

Maximum length: 255

Required: Yes

Example: "315-515"

7

Manufacturer Part ID

Description: Manufacturer's Part number

Data Type: String

Maximum length: 255

Required: No

Example: FLDR-111

Supplier Part ID	Manufacturer Part ID	
2772882	TTSIBM412CID	4
2772967	IDG076450049X	E
2772276		E
2772981		M
2772985	IDG07645762	S

Populate Template

8 Item Description

Description: Description of the product or service Product name or a short description of the product. Descriptions should be organized in the following manner: proper name (the Noun) and a list of key attributes (characteristics and their values).

Data Type: String

Maximum length: 2000

Required: Yes

Example: "Printer, Laser, A4, Epson Stylus 740"

Item Description	SPSC Code
Phone - 4-Line System, with Headset and Caller ID	34101004.1
Excel 97 for Dummies Quick Reference Book	55101509.4
Pens, Blue Ballpoint, Disposable	44121710.2
Manilla Folders, Tabbed 3 Position	44122011.6
Stapler, Swingline 405, Black	44121615.1

9 SPSC Code

Description: *United Nations Standard Products and Services Code* - Items should be assigned a classification code within UNSPSC Code ECCMA Version 13.5. Please use only Level 3 and Level 4 UNSPSC codes i.e.; 45678900 or 45678923. Find valid codes at:

<http://www.unspsc.org/> or supplier.ariba.com/Help/Guides

Data Type: String

Maximum Length: 40

Required: Yes

Example: 34101004

Populate Template

10 Unit Price

Description: WM specific contract price for a product. Cannot include any symbols or commas (\$, ¢, etc.) Must have minimum of two digits to right of decimal place when price includes both dollars & cents (five dollars & 90 cents should be 5.90). When unit price includes dollars only, do not include decimal or zeros(00) to right of decimal (five dollars should be 5).

Data Type: Double Integer

Maximum Length: NA

Required: Yes

Example: 4.32 5 6.90 .99

Unit Price	Unit of Measure
45.24	EA
19.90	EA
5	DZN
.99	PK
4.95	EA

11 Unit of Measure

Description: Designed to capture marketed units by which an item will be delivered when purchased and to which the unit price refers. Code has to be ISO compliant code. You can find a copy of the ANSI/UN codes at supplier.ariba.com, click **Help**, Guide Tab.

Data Type: String

Maximum Length: 32

Required: Yes

Example: BX

Populate Template

12 Lead Time

Description: Number of working days estimated from the supplier's receipt of the order to the delivery of the goods or services

Data Type: Integer

Maximum Length: 40 characters

Required: No

Example: 3

Lead Time	Manufacturer Name
1	Intellidata
3	IDG Books Worldwide
1	Bic
5	Mead
1	Swingline

13 Manufacturer Name

Description: The name of the Original Manufacturer or company that provides the item.

Data Type: String

Maximum Length: 255

Required: No

Example: Bic

Populate Template

14 Supplier URL

Description: The URL* for additional information or an image of an item located on a supplier website.

Data Type: String

Maximum length: 255

Required: No

Example:

<http://www.supply.com/catalog/product18.htm>*)

Include entire URL. Supplier and Manufacturers URL field cannot be a dynamic address. URL must be static, and specific to that item, not just supplier or manufacturer's home page.

Supplier URL	Manufacturer URL
http://www.idg.com/2772967	
http://www.idg.com/2772981	
	http://www.bic.com/277BLK
	http://www.mead.com/2981
http://www.idg.com/2772986	

15 Manufacturer URL

Description: The URL for specification data (i.e. MSDS Sheet) of an item within a catalog.

Data Type: String

Maximum length: 255

Required: No

Example: <http://www.manu.com/catalog/product18.htm>

*Include entire URL. Supplier and Manufacturers URL field cannot be a dynamic address.

URL must be static, and specific to that item, not just supplier or manufacturer's home page.

Populate Template

16 Market Price

Description: Retail Market Price of product without discount pricing.

Optional value, it can be left BLANK.

Data Type: String

Maximum Length: 255 characters

Required: No

Market Price	Supplier Part Auxiliary ID
50.24	
22.00	24-BLK
7.00	

17 Supplier Part Auxiliary ID

Description: Optional data entry. This is an optional field for the supplier, to be used only when the Supplier Part Id is not unique.

Data Type: String

Maximum Length: 255 characters

Required: No

Example: 123abc

Populate Template

18 Language

Description: Locale field includes the language of the catalog. This must be an ISO compliant code.

Data Type: String

Maximum Length: 255

Required: *If language other than en_US.
Defaults to en_US if not filled in.*

Example: en_US

Language	Currency
en_US	USD

19 Currency

Description: Identifies the type of currency used in the Price fields for a given item. This must be an ISO compliant code. Value defaults to what is in the CURRENCY head field if no value is entered in this field.

Data Type: String

Maximum Length: 32

Required: *If currency other than what is defined in the header. Defaults to the currency in the header if not filled in.*

Example: USD, EUR or GBP

Populate Template

20 Short Name

Description: Optional Short description for item. This field defaults to first 50 characters of Item Description if left blank. Use Short Name to provide succinct & meaningful description of item. Use Item Description to provide expanded product details along with Short Name description.

Data Type: String

Maximum Length: 50 characters

Required: No

Example: Pen, Felt, Black

Short Name	Image
4-Line Phone	http://www.manu.com/catalog/product18.jpg
Excel 97 for Dummies	http://www.manu.com/catalog/product22.jpg
Blue Ballpoint Pens	
Manilla Folders	
Standard Stapler	

21 Image

Description: Use this field to provide URL of item image.

Supported Image types: GIF, JPG, JPEG, PNG, TIF, TIFF.

Recommended Image size: 300x300 pixel.

For more information, go to supplier.ariba.com/Help, Ariba Catalog Format Reference Guide, pages 42-46.

Data Type: String

Maximum Length: 255

Required: No

Example: <http://www.manu.com/catalog/product18.jpg>(see following screen)

Local Images

- ▶ Suppliers that cannot host images on their servers can provide a local image file.
- ▶ Save local images to a zip file and email to catalogmanagement@ariba.com.

Note: Suppliers should provide hosted images when possible because the Auto Subscription Sync function is not an option for customers when suppliers provide local Images.

The screenshot shows the WinZip interface with a zip file named 'Acme_Warner_Local Image File.zip' open. The file list is as follows:

Name	Type	Modified	Size	R...	Packed	P...
redbicballpoint_...	JPEG Image	11/3/2010 9:40 AM	2,984	13%	2,602	
redbicballpoint_...	JPEG Image	11/3/2010 9:41 AM	3,822	16%	3,220	
8x11copypaper...	JPEG Image	11/3/2010 9:42 AM	3,845	6%	3,609	
8x11copypaper...	JPEG Image	11/3/2010 9:42 AM	3,989	5%	3,773	
5x7pictureframe...	GIF Image	11/3/2010 9:39 AM	1,199	0%	1,199	
5x7pictureframe...	GIF Image	11/3/2010 9:39 AM	1,173	0%	1,173	
4x5mirror.gif	GIF Image	11/3/2010 9:37 AM	3,118	25%	2,337	
4x5mirror_sm.gif	GIF Image	11/3/2010 9:37 AM	1,282	0%	1,282	
greenchair_125...	JPEG Image	11/3/2010 9:36 AM	3,130	21%	2,459	
greenchair_125...	JPEG Image	11/3/2010 9:36 AM	2,995	10%	2,688	

A callout box on the right lists the files/folders in the zip file:

```
Files/Folders in Zip file: 10

Saving the CIF File

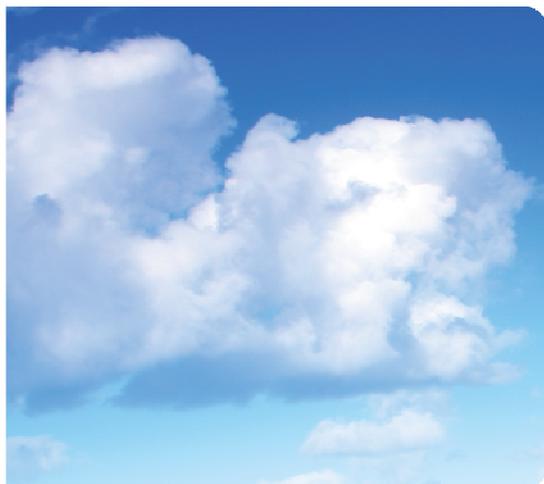

Your Catalog Content file is now complete and ready to be saved!

Save your file using the following naming convention:

Example: *Acme_Warner_Corp.xls*

Uploading the Catalog to the Ariba Network

Catalog Upload/Publish Process

- ▶ **Uploading** transfers the catalog file from your local drive to the Ariba Network. During the upload process, you enter the catalog name and descriptive text, and classify it so that buying organizations that are looking for products and services of a specific type can find your catalog.
- ▶ **Setting Visibility** allows you to specify whether the catalog version is public or private, which determines which buying organizations can access it.
- ▶ **Validating** checks the catalog for syntactic and semantic errors. The Ariba Network will conduct a high-level validation of UNSPSC codes, Units of Measure and check for zero price values. (Note: WM-specific validation rules for UNSPSC and UOM codes, and zero price values can be more detailed and much more strict than the high-level network validations, therefore your catalog may pass the network validations but fail the WM-specific validations for these same items.)
- ▶ **Publishing** freezes the current version and notifies WM of its availability.

Catalog Upload/Publish Process

- ▶ The Ariba Network provides an Excel-to-CIF converter that automatically detects Excel files and converts them to CIF text format. It can also convert CIF files back to Excel format for downloading.
- ▶ You can compress Excel files using a zip utility. Zipped files must have a .zip extension. The maximum size of Excel files that can be uploaded is one MB (uncompressed).
- ▶ To upload catalog files:
 - ◆ Log in to your Ariba Network account.
 - ◆ Click “**Catalogs**” on the upper left navigation bar.
 - ◆ Click “**Create Standard**” on the catalog dashboard to create a CIF catalog.
 - ◆ Specify standard catalog information such as name, description, and commodities.
 - ◆ Select WM to publish catalog to.
 - ◆ Browse for catalog and select the .xls, .cif or .zip file.
 - ◆ Click “**Validate and Publish**”.
- ▶ The Ariba Network uploads the file, converts it to CIF format, and starts the validation. Conversion from Excel to CIF can take several minutes depending upon the catalog size. As Excel files convert, their status is “**Validating**”.

Catalog Upload/Publish Process

This section is intended to walk you through the process of logging into your Ariba Network supplier account and loading/publishing your new/updated catalog content.

Log into your Ariba Network account - supplier.ariba.com – using your Username and Password.

NOTE: Log into your **Test** account to upload your initial test catalog.

A screenshot of the Ariba Supplier Network-EA Log In page. The page has a light blue header with the title 'Ariba Supplier Network-EA Log In'. On the left side, there is a logo for 'ARIBA Supplier Network' featuring a red stylized 'A' and the text 'ARIBA Supplier Network'. The main content area contains a login form with two input fields: 'Username:' and 'Password:'. A 'Log In' button is positioned below the password field. A red oval is drawn around the 'Username:', 'Password:', and 'Log In' fields. To the right of the form, there are some partially visible links: 'Jo', 'Re', 'bu', and 'Re'. Below the form, there are links for 'Forgot Username?' and 'Forgot Password?'.

Catalog Upload/Publish Process

Accessing your Test account for the first time

After taking ownership of your production account and accept the terms and conditions, you will find a link above your name: **“Switch to Test Account”**. Click this link to gain access to your Test account.

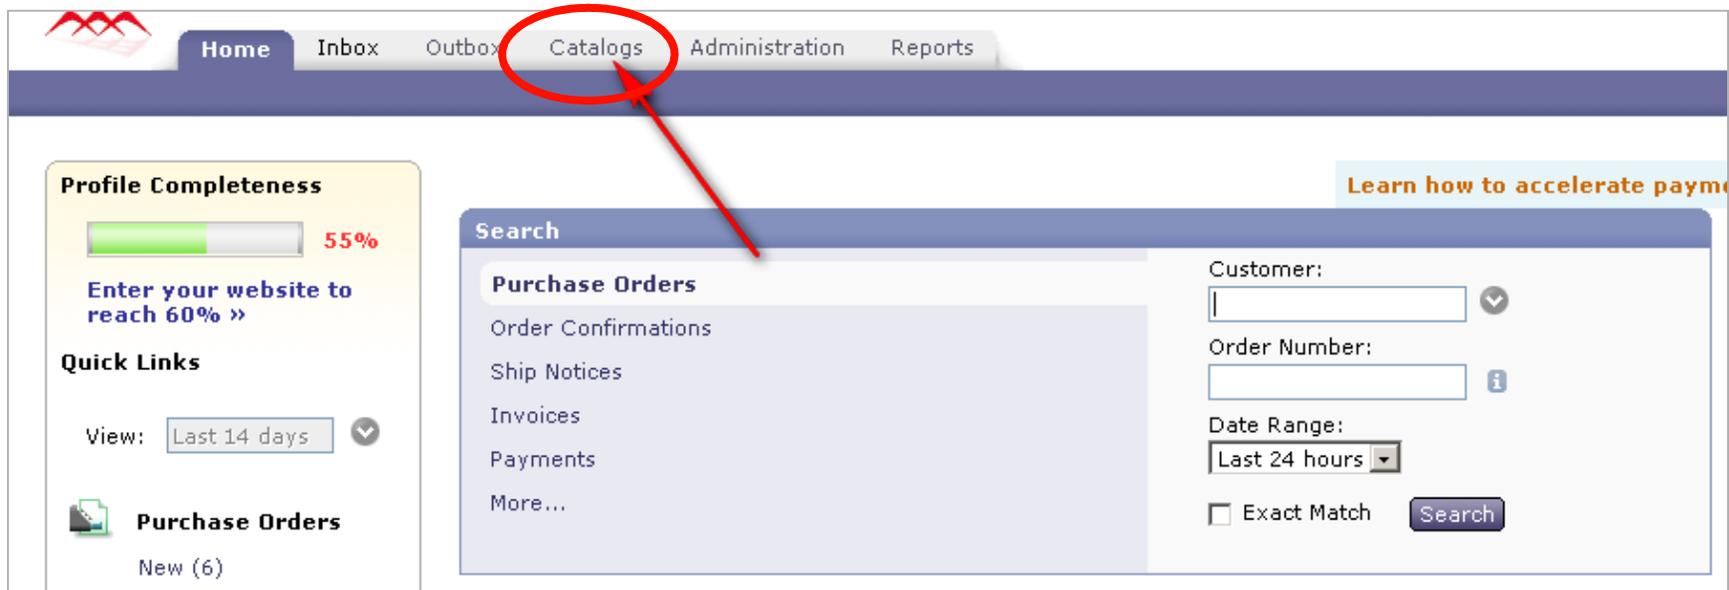

Catalog Upload/Publish Process

2

Click the “**Catalogs**” tab on the upper left of the navigation bar.

Catalog Upload/Publish Process

3 At the bottom of the catalog dashboard, click **“Create Standard”**

Note: You only need to **“Create Standard”** for the initial catalog subscription upload.

Catalog Upload/Publish Process

6 **Browse** for the appropriate catalog subscription and select **“Validate and Publish”**. The network will check for **Syntactic** and **Semantic** network/WM-specific validation rules.

Upload Your Catalog File

D:\Data\Dawn\EA_Test_Catalog_WI.cif

! After you click Validate and Publish, do not use your Web browser until your catalog is finished uploading.

2. **1.**

A screenshot of a web interface for uploading a catalog file. At the top, it says 'Upload Your Catalog File'. Below that is a text input field containing the file path 'D:\Data\Dawn\EA_Test_Catalog_WI.cif' and a 'Browse...' button. A red arrow points from a red box containing the number '1.' to the 'Browse...' button. Below the input field is a warning message: '! After you click Validate and Publish, do not use your Web browser until your catalog is finished uploading.' At the bottom, there is a yellow 'Validate and Publish' button. A red arrow points from a red box containing the number '2.' to this button.

Catalog Upload/Publish Process

- 7** ▶ After the entire catalog has been uploaded, the Ariba Network begins catalog validation. It can take several minutes to validate large catalogs. The Ariba Network stores new catalogs in a queue and validates them one by one. You can upload other catalogs while the Ariba Network is validating.
- ▶ Once you have completed uploading your catalog(s), do not log out. Click the **“Refresh”** button on the catalog dashboard to update your catalog status.

Catalog Name	Version	File Name	Type	Size	Visibility	Created By	Date Created	Status

--------	------	---------	------------------	-------------	-----------

Catalog Upload/Publish Process

Auto Subscription Sync

If WM is using AutoSubscriptionSync, the catalog is pulled into the WM's Ariba application to begin the WM-specific validations and the status will change to **“Pending Buyer Validation”**.

CIF3.0	98 KB	Private	Seb Sussman	4 Oct 2010	Pending Buyer Validation
--------	----------	---------	----------------	------------	--------------------------

Catalog Upload/Publish Process

- ▶ Ariba OnDemand Customers can download catalogs manually from the Ariba Network or set up AutoSubscriptionSync so that catalogs will automatically push to their OnDemand application from the network. AutoSubscriptionSync will allow the network to automatically update your WM's existing catalogs in their Ariba OnDemand application when new versions are available.
- ▶ Each time you need to update a catalog file, you must maintain the same catalog subscription name instead of creating a new subscription each time. Otherwise this will cause errors when the subscriptions are automatically pushed to WM's OnDemand application. This is accomplished by using the "**View/Edit**" button on the Catalog Dashboard.

Updating Catalog Subscriptions

Catalog View/Update Process

When updating a catalog, it is not necessary to create a new standard. It is important to maintain the same catalog subscription name.

This section is intended to walk you through the process of updating your catalog subscription content using “View/Edit”.

Catalog Subscription Name

View/Edit Test Delete | Create Standard Create Punchout Only Refresh

Catalog View/Update Process

1

- ▶ After you have logged into your Ariba Network account and navigated to the Catalog dashboard:
 - ◆ Choose WM as customer
 - ◆ Select the radio button next to the catalog you want to update
 - ◆ Click on the yellow “**View/Edit**” button in the bottom left-hand corner of the screen.

The screenshot shows the 'Catalogs' dashboard with a table of catalog entries. The table has columns for Catalog Name, Version, File Name, Type, Size, Visibility, Created By, Date Created, Status, and Date S. The 'Customer Name: Ariba Ready Test (10)' group is expanded, showing a catalog entry for 'Acme_TestCustomer' with a radio button selected. Below the table, there are several buttons: 'View/Edit', 'Test', 'Delete', 'Create Standard', 'Create Punchout Only', and 'Refresh'. Red arrows and callouts indicate the steps: '1.' points to the radio button, '2.' points to the 'View/Edit' button, and '3.' points to the 'View/Edit' button.

Catalog Name	Version	File Name	Type	Size	Visibility	Created By	Date Created	Status	Date S

← **2.** **1.**

- ▶ Don't forget to click the “**Refresh**” button to update the catalog status when you are returned to the Catalog Dashboard.
- ▶ If you modify and reload an existing catalog that passed validation in the past, it may no longer pass validation because of one of the following reasons:
 - The semantic qualification checking was less sophisticated
 - WM may have added stricter catalog validation rules since you last validated the catalog.

Catalog Validation and Errors

Catalog Validation

A validation rule is a set of constraints applied to a catalog or catalog item.

- ▶ Can specify at the network level, certain high-level rules for validation of the catalog.
 - ◆ **UNSPSC checking**
 - Is supplier UNSPSC version compatible with WM version?
 - ◆ **Unit of Measure checking**
 - Is supplier using UNUOM's?
 - ◆ **Acceptance of zero price items**
 - If the supplier has zero price items in the catalog, will they be accepted by the WM?
- ▶ Can specify whether the value for a catalog field is mandatory or optional.
- ▶ Global validation rules are rules that are applicable to all suppliers.
 - ◆ Stricter UNSPSC and UOM validations
- ▶ Supplier-specific validation rules are rules that are applicable only to a particular supplier; supplier-specific rules take precedence over Global validation rules.

Catalog Validation

You can view the catalog validation rules set by your Ariba OnDemand customers (this function is not available to customers using Ariba Buyer). As a best practice, it is recommended that you view the customer's catalog rules before your upload a catalog.

The following pages will walk you through the process of viewing your customer's catalog validation rules.

Catalog Upload/Publish Process

Validation Rules

This section will walk you through the process of punching in to WM's validation rules.

1 Log into your Ariba Network Supplier Account.

2 On the navigation bar at the top left of the page, click on the **Administration** tab then click **Customer Relationships**.

Catalog Upload/Publish Process

Catalog Subscription Status

AN Validation

Catalog Status	Definition
Validating	Catalog is in the process of being validated against the Ariba Network high-level syntactic and semantic validations.
Published	The catalog has been published to customers manually loading catalogs. The Ariba Network sends an email notification to your customer informing them your company has published a catalog.
# Errors Found by Ariba Network	The catalog failed during Ariba Network high-level validation. The AN checks the catalog for syntactic and semantic errors. The network will also conduct a high-level validation of UNSPSC and Units of Measure codes, and checks for zero price values. These errors must be corrected first before the catalog can begin WM-specific validation rules. To view details of the error, click the " # Validation Errors Found by Ariba Network " link for this catalog on the catalog dashboard and view details of the error message within your Ariba Network account.
Bad File Format	The catalog has encountered catastrophic errors. The errors must be fixed before the network can perform the high-level validations.

Catalog Subscription Status

Auto Subscription Sync

Catalog Status	Definition
# Validation Errors Found by Customer	The catalog failed during validation of WM-specific rules in Ariba OnDemand. During validation, Ariba OnDemand validates the catalog against WM-specific validation rules. The catalog did not meet the customer's catalog rules and validation failed. To view details of the error, click the " # Validation Errors Found by Customer " link for this catalog on the catalog dashboard and view details of the error message by punching in to Ariba OnDemand.
Pending Buyer Validation	The catalog is uploaded successfully in Ariba OnDemand and is pending validation.
Validated by Customer	The catalog is successfully uploaded in Ariba OnDemand, passing validation, but not yet approved by the customer.
Approved	The catalog has been approved by the customer during the approval process.
Rejected	The catalog has been denied by the customer during the approval process.
Activated	The catalog is activated and available to users in Ariba OnDemand.
Deactivated	A catalog version activated earlier is now deactivated. Catalogs can change statuses from Activated to Deactivated states and back.
Deleted	The catalog has been deleted by the customer in Ariba OnDemand.
Changed	The customer made some changes to the catalog.

Catalog Validation

Validation Errors

Errors can either occur when validating against the high-level Ariba Network rules,

Type	Size	Visibility	Created By	Date Created ↓	Status
CIF3.0	5 KB	Private	Seb Sussman	4 Oct 2010	 3 Errors Found by Ariba Network

or when validating against WM-specific validation rules.

CIF3.0	3 KB	Private	Seb Sussman	1 Sep 2010	 122 Validation Errors Found by Customer
--------	------	---------	-------------	------------	---

(Note: even if a catalog passes the high-level Ariba Network validation rules, you could still receive a notification within 24 hours informing you the catalog has failed the WM-specific catalog validation rules.)

Catalog Validation

Validation Errors

6 To review network validation errors, click on the “...Errors Found by Ariba Network” message. You will be provided with an error description, field, and line number associated with the errors.

Click **Help** to display the context-sensitive help screens that will assist you in correcting errors **Please note: Help files are ENGLISH language only**

The catalog file contains errors. To fix the error, upload a new catalog file or click the item in the Error Description column, or ...

Introduction and Overview

This [Acme Project Notification Letter](#) describes the project and the reasons Acme has decided to start this effort.

As noted in the above Notification Letter, Acme is utilizing the Ariba Spend Management software and the Ariba Network (AN) to electronically transact business with its suppliers. Purchase orders, notifications, shipping information and invoices will be submitted electronically for suppliers and commodities in scope.

What's In?

Automated purchase ordering, order confirmations, advanced shipment notifications, electronic invoicing, and catalogs on the Ariba Network.

What's Out?

Manual purchase ordering, mailing invoices.

Next Steps

1. Review the Acme Procurement Project Notification Letter (see link above).

Catalogs

As part of the Ariba project, Acme has changed the catalog content loading processes to a fully electronic, internet based process utilizing tools from Ariba, Inc. This change will require your company to provide catalog content to Acme through the Ariba Network. The following [Catalog Training Guide](#) details the steps for providing catalog content to Acme. Click on the link to review.

Attend Supplier Education Summit	Option 1: Day Month, DD Option 2: Day Month, DD Option 3: Day Month, DD	The Ariba catalog team will host group training sessions via Webex or phone to review the specific tasks required to create your CIF catalog. The dates, times, and web address to participate in the sessions will be provided in a separate communication.
3. Supplier Builds Catalog	Beginning Day Month, DD, YYYY	All supplier content to be created using the “CIF” Excel template which is available on the WM supplier portal via the Ariba Network.

Project Timeline

Task	Due Date	Description
4. Supplier Publishes Test Catalog	By Day Month, DD, YYYY	Supplier publishes the CIF catalog via their Test account on the Ariba Network (AN). All supplier content will be reviewed during this time. Any corrections will be requested from the supplier if necessary.
5. Testing	Beginning Day Month, DD, YYYY	WM will be sending test purchase orders to your company and will ask you to confirm receipt of the purchase orders. In addition, we will be requesting that you send a test invoice back to WM using your Ariba Network account.
6. Supplier Publishes Production Catalog	By Day Month, DD, YYYY	Supplier publishes the CIF catalog via their Production account on the Ariba Network (AN). All supplier content will be reviewed during this time. Any corrections will be requested from the supplier if necessary.
7. Planned Go-Live	Day Month, DD, YYYY	Your CIF catalog will be loaded into WM's production eProcurement system. NOTE: Your company will be notified of the official go-live date when WM start sending "Live" purchase orders using the Ariba Network. At that time, it is expected that your company will accept all purchase orders from your supplier account on the Ariba Network.
